```
The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 272 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnost a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, endocrine autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, dastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp colymorphisms also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline polymorphisms, as molecular weight markers a dithp polymucleotide of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             363
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        483

gene in

```
The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 272 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human classociated the invention polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, cautoimmune/inflammatory disorder, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or paralte. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide from minute biological samples, in detecting single nucleotide of polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp polynucleotide of the invention. Note: The sequence represents a dithp polynucleotide of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TICCGIGIGGCAGCIGIGGGCCCIGIGGGIGCIGCIGGGAACCGGIICACCIGCCCCAGACA 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcome in the may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                    soft tissue sarcoma; cytostatic; gene therapy; vaccine; screening; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              66 TGGCTACCGCGTGGAGGTG---AAGGAGGGGCCACAGGCCAGTGGCGGCTGTGCCACGA 122

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual determining the expression of a gene in both same or different individual. Of protein expression in the first soft tissue samples and comparing the expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CAGCCAGGGCATCACACTGACATGGACAGCACCTCGGGGCCCCGGCAGCGCCCACATCCT 1804

The present sequence is that of Incyte clone 7126129CB1 cDNA encoding human cell adhesion and extracellular matrix protein 4 (CADECM-4). A consentative cDNA library for the full-length polynucleotide is mustine to the full-length polynucleotide is mustine the muscle tissue RNA of a Caucasian adult man. Homology data suggest the encoded protein to a titin muscle protein. The invention provides CADECM-1 to -11 polypeptides (see ABP58224-34) and continuous provides CADECM-1 to -11 polypeptides (see ABP58224-34) and controlled and antagonists. These are useful for diagnosing, antibodies, agonists and antagonists. These are useful for diagnosing, cantibodies, agonists and antagonists. Passesion of treating or preventing disorders associated with aberrant expression of cabero, particularly call proliferative disorders (e.g. arteriosclerosis, catherosis, hepaticis, paroxysmal nocturnal cathoosis, paperania or cancer), developmental disorders (e.g. renal ctubular acidosis, anaemia or mental retardation), neurological disorders (e.g. Alzheimer's disease, Parkinson's disease or epilepsy), reproductive disorders (e.g. infertility or a disruption in the menstrual cycle), or autoliminatory disorders (e.g. AIDS, allergy, asthma, autoimmune continuous/inflammatory disorders (e.g. AIDS, allergy, asthma, autoimmune continuous/inflammatory disorders (e.g. AIDS, allergy, asthma, autoimmune continuous phintis, Goodpasture's syndrome, gout, Graves' disease, contact dermatitis, paneders mentalitis, selectoris, paneders inflammatory disorders (e.g. AIDS, allergy, asthma, autoimmune content disorders (e.g. AIDS, allergy, asthma, autoimmune content dermatitis, paneders mentality desease, disease, disease, disease, disease, contact dermatitis, paneders amplitue, contact dermatitis, paneders amplitue, contact dermatitis, paneders amplitue, desease, disease, dis

The present invention relates to new isolated proteins (NOVX) and their coding sequences (ABV99327-ABV99555 and ABP70049-ABP70149), where X is any unber from 1 to 48. The NOVX proteins and coding sequences are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The NOVX coding sequences and proteins are useful for treating, preventing or disances, anorexia, cancer-associated cachexia, cancer, neurodegenerative diseases, Alzheimer's disease, parkinson's disease, immune disorders, heamatopoietic disorders, cardiovascular disorders, fertility, bronchial asthma, AIDS, dyslipidemia, metabolic disorders associated with obesity, metabolic syndrome X or wasting disorders associated with chronic diseases or various cancers. The NOVX coding sequences and proteins may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, heamatopoiesis, wound healing and angiogenesis, in gene therapy, in generation of an angiogenesis, or antibodies that bind immunospecifically to NOVX substances for use in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Rastelli L, Mezes PD, Smithson G, Guo X, Gerlach V, Casman SJ; Boldog FL, Li L, Zerhueen BD, Tchernev VT, Gangolli EA, Vernet CAM; Bena CEA, Burgese CE, Liu X, Spytek KA, Gorman L, Spaderna SK; Vose EZ, Malyankar UM, Anderson DM, Parturajan M, Miller CE; Taupier RJ, Padigaru M, Shenoy SG, Kekuda R, Gusev VY, Pochart PF;

New NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders e.g. diabetes, cancer, Alzheimer's disease, dyslipidemias, obesity, immune or hematopoietic disorders, and asthma.

Claim 16; Page 133-137; 619pp; English.

The present invention relates to new isolated proteins (NOVX) and their coding sequences (ABV99327-ABV99595 and ABP70049-ABP70149), where X is any number from 1 to 48. The NOVX proteins and coding sequences are

```
associated with a human disease, preferably a NOVX-associated disorder. The NOVX coding sequences and proteins are useful for treating, preventing or diagnosing diseases such as metabolic disorders, diabetes, obseity, infectious disease, anorexia, cancer-associated cachexia, cancer, neurodegenerative disease, Alzheimer's disease, Parkinson's disease, immune disorders, haematopoietic disorders, cardiovascular disorders, fertility, bronchial asthma, AIDS, dyslipidemia, metabolic disturbances associated with obesity, metabolic syndrome x or wasting disorders associated with obesity, metabolic syndrome x or wasting clantification of small molecules that modulate or inhibit e.g. centrogenesis, cell differentiation, cell proliferation, heematopoiesis, wound healing and angiogenesis, in gene therapy, in generation of antibodies that bind immunospecifically to NOVX substances for use in
                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1031

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8750
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8870
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                            The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180

Kinase, 59079 or 12599 polypeptide, encoded by nucleic acid molecule comprising at least 85% identity to the nucleic acids appearing as ABX11641 and ABX11642 or their complement. a naturally occurring variant of the kinases or their fragments. Also included are a non-human host cell contactining the nucleic acids, an antibody specific for the proteins, identifying a compound which binds to the kinase (by contacting the nucleic acids, an antibody specific for the proteins, identifying a compound which binds to the kinase (by contacting the kinase or a cell expressing the kinase to the kinase or a cell expressing the kinase binds to the test compound and modulating the activity of kinase using the identified compound) and modulating their encoding nucleic acids are useful as diagnostic and therapeutic agents for preventing a disease or condition associated with an aberrant or unwanted 59079 or 12599 activity in a subject, including cardiovascular diseases such as heart failure, and myocardial infarction; disorders involving blood vessels such as atherosclerosis; and Kaposi's sarcoma; blood platelets disorder such as therobic posenia, leukaemia, closease, haemolytic ansamia; cellular proliferative disorders such as cancer; and protein kinase disorders such as autoimmune confiscates, disorders are included in the specification). The kinases, their concoding nucleic acide and antibodies are useful in screening assays, detection assays (e.g. forensic biology), and predictive medicine (e.g. diagnostic assays, prognostic assays, and monitoring clinical trials and paramacogenomics). The kinases and their encoding nucleic acide and antibodies are useful as query sequences to perform a search against public databases to identify other family members or related sequences. The present sequences to related sequences. The kinase acide are accident as eauch as accident as eauch as accident as equences.
Human; 88; gene; serine/threonine kinase; protein kinase; 12599; cardiovascular disease; heart failure; myocardial infarction; blood vessel disorder; atherosclerosis; Kaposi's sarcoma; blood platelet disorder; thrombocytopaenia; leukaemia; Hodgkin's disease; haemolytic ansemia; cellular proliferative disorder; cancer; protein kinase disorder; autoimmune disorder; diabetes mellitus; psoriasis; inflammatory bowel disease; rheumatoid arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated human protein kinase, designated 59079 or 12599 polypeptide, useful as diagnostic and therapeutic agents for preventing cardiovascular diseases, proliferative disorders, and protein kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                72.-73978

The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 in the specification). ABNI5762 to ABNZ7252 encode the human ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating a syndrome associated with ORFX-associated disorder. ORFX polynucleotide squences can be used in Gene treatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, Keloid, degenerative disorders, hammorrhage, osteoarthritis, neurodegenerative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders related to organ transplantation, cardiovascular diseases, diabetes mellitus, systemic lupus erythematosus, hypertension, hypothyroidism, cholesterol ester clouge disease, various immune deficiencies and disorders, infectious disease, autoimmune thyroidiis, mysathenia gravis, graft-versus-host disease and autoimmune inflammatory eye disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, N. B. The sequence data for this patent did not systemic cytokine damage. N. B. The sequence data for this patent did not for my part of the printed specification, but was obtained in electronic forms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention fracters to move integrated and controlled and to their encoded proteins (DITHP; ABR41136-ABR41812). The invention also relates to polymucleotides designated ditth (GCG4608-ACG46749) and to their encoded proteins (DITHP; ABR41136-ABR41812). The invention also relates to polymucleotide sequences at least 90% identical to the ditthp cDNA sequences of the invention; recombinant worder calls and recombinant production of DITHP proteins; antibodies specific for DITHP proteins; microarrays comprising ditthp nucleic acid sequences; methods of detecting ditth nucleotide and protein sequences; methods of for compounds which specifically bind a DITHP protein; and methods of for compounds which specifically bind a DITHP protein; and methods of consensing the toxicity of test compounds using a ditthp hybridiaarion probe. Dithp nucleic acid sequences and DITHP protein and methods of diagnosis of a wide variety of conditions including cancer and other cell compounds with a wide variety of conditions including cancer and other cell control of sequences and DITHP proteins may be used in the disorders; metabolic disorders; neurological disorders; pastrointestinal disorders; bacterial, consorders; and connective tissue disorders. They may also be used to proteins can additionally be used in analysis of the protecome of a tissue concerning can additionally be used in analysis of the protecome of a tissue mentioned above, as a source of antisense sequences, as a source of antisense sequences, as a source of antisense sequences, as a source of the proteins of individuals, in the generation of individuals, in the generation of transgenic animal models of human disease of knowled to the proteins of the proteins can be a minmal models of human disease of the proteins of the generation of the proteins Novel human diagnostic and therapeutic polypeptide useful for identifying test compound which specifically binds to a polypeptide encoded by human diagnostic and therapeutic polynucleotide, and to induce antibodies. invention relates to novel human diagnostic and therapeutic Claim 2; SEQ ID NO 136; 591pp; English. 

humanised animals, in toxicological testing, and in transcript imaging. The present sequence represents a dithp cDNA encoding a DITHP protein which has intracellular signalling activity. Note: The sequence data for

ACC46215 standard; cDNA; 2559

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAV38642-AAW42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral activities and shy Drager Syndrome. Other uses include the utilisation of the activities such as Immune system suppression, Activity, chemotactic/chemokinetic activity, haemostatic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes nucleic acids (I) associated with bladder cancer tissue. Also described: (1) peptides and proteins (II) containing an amino acid sequence encoded by (II); (2) a method for diagnosing bladder cancer (BC), or monitoring its progression, that uses (I), (II) or agents (Z) that inhibit, or bind to, (I) or (II), labelled with a reporter; and (3) a method for treating BC that uses (I), (II) or (Z). (I) and (II) have cytostatic activity. (I) and (II) can be used to detect (and monitor progression of) bladder cancer (BC), or the risk of developing it; to screen for specific binding agents (Z), and to treat BC. (Z) are also useful as diagnostic and therapeutic agents. The present sequence represents a human nucleotide sequence associated with bladder cancer, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2842 éregreresagceacaaarcesaacecerecesagasagesagasagasecradasecrearece 2901

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2433
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2493
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynocleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous to system, such as peripheral nervous injuries, peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhish activity, chemocatcic/chemokinetic activity, haemocatcic/chemokinetic activity, haemocatcic/chemokinetic activity, associatic assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               réreirédécécitégégégéceagrégrécréadériéréaacrérécégégégégégécecécé 2553

                                                                                            The present invention describes a predictor set comprising a plurality of polymucleotides or polypeptides whose expression pattern is predictive of the response of cells to treatment with a compound that modulates protein tyrosine kinase activity or members of the protein tyrosine kinase comparison obtaining a sample of cells, comprising obtaining a sample of cells, concellating the activity of cells, comprising obtaining a sample of cells, correlating the expression of the markers to the compound's ability to modulate the activity of the cells, (2) a plurality of cell lines for identifying polymucleotides and polypeptides whose expression levels correlate with compound sensitivity or resistance of cells associated with a disease state, compound sensitivity or resistance of cells associated with a disease state, compounds, analysing the expression pattern of polypeptides that predict compound sensitivity or resistance of cells associated with a disease state by using the created of cells associated with a disease state by using the cypression pattern of cells associated with a disease state by using the expression pattern of the microarray. The polymucleotides and polypeptides that predict the sensitivity or compounds that interact with polymucleotides and colls associated with a disease state by using the expression pattern of the microarray. The polymucleotides and cutivity of compounds that interact with protein tyrosine kinase pathways. These may be used in determining drug censitivity in patients to allow the development of individualized centerin tyrosine kinase pathways. These may be used in determining denering profiles which aid in treating diseases and disorders (sensitivity in patient response at a molecular level. The present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2783 rérerésécecerdésésásecasrésrécrésrésrésrésrésrés a rerecedésecrés de 2842

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hircheprung's disease, chronic colitis or ulcerative colitis. The present sequence is a genomic DNA fragment encoding a digestive system antigen of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Polynucleotides encoding digestive system antigens, useful for diagnosing, treating, preventing and/or prognozing disorders of the digestive system, particularly cancer and cancer metastases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AUG-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  14-AUG-
  Sequences AAS28878-AAS28926 represent genomic DNA molecules which encode the immunoglobulin polypeptides of the invention. The polynucleotides and polypeptides can be used to diagnose a pathological condition or a subseptibility to a pathological condition in a subject by determining the presence or amount of expression of the protein. Alternatively the identification of a binding partner to a sequence allows determining changes in protein activity. The sequences can be used as research tools for receptors or other signal transduction pathway proteins that interact with the polypeptides of the invention and can be used to tract, prevent or diagnose various types of disorders and answell disorders, cardiovascular disorders gastrointestinal disorders, muscular disorders, proliferative disorders, muscular disorders, pulmonary disorders, proliferative disorders, muscular disorders, pulmonary disorders, proliferative disorders, muscular disorders, pulmonary disorders, proliferative disorders and cancer. Note: The sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequences and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       7277
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             7216 GAGGGCCCCCGCCGAGTCCTCTGCATCCAGGCTGCAGGCCCAGCCCATGCAGGGCTCTAC 7157

These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a Gaps Sequence 20565 BP; 4236 A; 6155 C; 5760 G; 4414 T; 0 U; 0 Other; . 0 15.1%; Score 60.6; DB 4; Length 20565; llarity 54.8%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                               Where differences are found these are annotated as variations usually against a compared iron overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (1.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em.; EMBL; Sw.; SWISSPROT; Tr., TREMBL; Wp.; WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence was generated from part of bacterial clone contigs of human droup. Further information can be found at http://www.sanger.ac.uk/HGP/Chr1
RRII-245P10 is from the library RPCI-11.1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm

It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
